## Tinting Consent

Lash and Brow Tinting involves dyeing the hairs in the chosen area to a desired color. A solution is applied and remains on the area 3-10 min depending on the color and area chosen. The tinted color usually lasts 3 to 4 weeks.

In both the lash and brow area, a slight discoloration of the surrounding skin may occur which should resolve in 12-24 hours. During the procedure, there may be a mild stinging in the eye area and the skin will be flushed when the solution is removed. The ingredients in the solution may cause skin irritation on certain individuals or cause an allergic reaction. For sensitive patients, we offer a preliminary test to determine if a sensitivity of allergic reaction will occur.

I fully understand the tinting process and consent to treatment. I have had an opportunity to ask questions and receive answers to my satisfaction.
